Thread Veins, Port Wine Stains or Birthmarks

Thread veins range in size from small telangiectasias (small thread veins, spider naevi) to larger Port Wine Stains or birth marks. Our laser treatment offers an effective and clinically proven therapy to remove these lesions. 2-4 treatments are generally necessary to remove the thread veins, this will however depend on the size and severity of the vein. The results you will achieve from the laser treatments are removal of the thread vein or decreased size and skin texture and pore size will be improved, the skin will look brighter.

Area	Single Treatment
Facial Thread Vein	From £80

Acne Treatment

Acne occurs when sebum is unable to leave the skin because a hair follicle is blocked. This may result in growth of bacteria below the surface of the skin. Inflammation can occur, and rupture of an inflamed area can lead to scarring. Our laser treatment works by reducing the blood supply to the sebaceous gland, which slows down production of sebum and accelerates the healing process for acne.
